

Recycling batteries responsibly is crucial for reducing pollution, conserving resources, and promoting sustainable living. In this article, we will explore why battery recycling is important, ...

With a comprehensive techno-economic analysis, the cost of battery-grade lithium compounds production, i.e., lithium carbonate (LC) is evaluated and lithium hydroxide monohydrate (LHM), ...

In a significant move to strengthen India's formal e-waste recycling ecosystem, Ecoreco, the country's leading e-waste management company, has announced the expansion of its ...

By connecting companies to trusted recycling and refining partners, Blackion facilitates the recovery of Black Mass and its conversion into high-purity, battery-grade lithium carbonate, ...

The global market for recycling used power batteries is experiencing explosive growth, driven by escalating environmental concerns, stringent regulations on e-waste disposal, and the surging ...

For the first time in the battery recycling sector, lithium was extracted and purified from shredded electrodes (black mass) containing various chemistries, including nickel-manganese-cobalt ...

Batteries are so ubiquitous in electronics, both rechargeable and replaceable, that keeping them out of the wrong waste streams is a great challenge. The consequences of not doing so include collection truck and facility fires, ...

Lisbon is the first European capital to roll out a city-wide reusable cup system backed by a local deposit-return model. The initiative - driven by a collaboration between the City of Lisbon, ...

Li-ion battery (LIB) recyclers have continued to gather large volumes of new funding, form new strategic partnerships, and commission large-scale facilities over the last few years. This has ...

A Surge in EV Battery Recycling in Japan As electric vehicles (EVs) rapidly gain ground across Japan, attention is shifting to what happens to their batteries at the end of their life cycles. ...

Electric vehicle or EV battery recycling in China is growing into a multibillion dollar business as investors are eyeing opportunities in surging volumes of retired new energy vehicles, or NEVs. Analysts said enhanced ...

The Li-ion battery black mass recycling service market is experiencing robust growth, driven by the increasing adoption of electric vehicles (EVs) and portable electronics, leading to a surge in spent lithium-ion batteries. While precise ...

Battery recycling capital

1. Lohum Recycler of lithium-ion batteries, repurposing batteries and refining battery raw materials. The company provides single-point lithium-ion battery recycling and reuse solutions. It recovers and recirculates critical ...

China's industrial regulator plans to launch a major document to guide the production capacity of lithium-ion batteries, which industry experts said will knock out a batch of low-end ...

Doubra Eghaghe from Alitheia Capital shared the fund's motivation for investing in Hinckley. She noted the rising demand for batteries due to electric vehicles and renewable energy, which has ...
