What you need to know: Clean energy reliably powered California to levels never seen before - 67% in 2023 - as renewable energy and clean resources continue to advance the state's world-leading energy transition while fueling the ...

EDPR NA Distributed Generation, the distributed generation business of EDP Renewables North America, and California Water Service have signed a 20-year PPA for a 2.35-MW DC onsite solar array at Cal Water's Northeast Bakersfield ...

California has introduced a total of 25,000MW of new energy means to its grid since 2019, a majority being solar and battery storage. These efforts align with Newsom's plan to add ...

Through the first five record-setting solar and battery months of 2025, 11.5% of California's potential solar generation was curtailed to maintain grid balance. That's down from 13% over ...

Solar Optimum, a leading force in renewable energy, is proud to announce its monumental achievement of retaining the coveted #1 California Residential Solar Contractor (EPC) ranking ...

California has officially achieved a landmark milestone: solar power frequently dominates electricity generation within the state. This isn't a future prediction; it's a recurring reality, ...

HES Renewables was formed after several years of strong growth attributed to innovation, focus on client needs, and best-in-class commercial energy system construction. HES Renewables ...

Residential Solar Permit Reporting Program - SB 379 The Energy Commission's reporting hub for California cities and counties to annually provide data about online, ...

For the first five months of 2025, CAISO data showed solar electricity curtailment declined by 12% as a share of generation, falling from 13% to 11.5%, even as solar output grew 18% year over ...

One of the most interesting takeaways is that California reduced its solar curtailment rate by 12% year-over-year, from 13% to 11.5%. At the same time, solar generation grew 18%. This means the grid handled more solar power ...

As I'll explain here, this 22% difference in Peak Sun Hours will equate to a 22% difference in solar energy production. In solar energy applications, what truly counts isn't the hours between sunrise and sunset in a ...

For Californians seeking clean energy solutions and relief from rising electricity costs, the Self-Generation

## Brazzaville california solar energy

Incentive Program (SGIP) offers a compelling opportunity. Since its inception, SGIP has provided significant ...

These adverse state policy impacts exacerbated financing shifts, triggering plummeting demand and an 80% decrease in rooftop solar installation volume. The California Solar & Storage Association reports that the fallout ...

A unit of EDP Renewables (EDPR), part of Portuguese utility group EDP Energias de Portugal SA (ELI:EDP), will supply power from an on-site distributed solar farm to California Water Service ...

The Williamson Act, designed to protect California's farmland, has become a contentious subject in light of the state's growing need for solar energy. As the demand for renewable energy sources rises, many experts argue that the act ...

Transparent solar windows that capture ultraviolet and infrared light are now available in the US, enabling buildings to generate clean energy while maintaining aesthetic appeal.

New York's solar incentives in 2025 make it one of the best years to go solar in the state. With tax credits, cash rebates, and utility bill savings, the return on investment is better than ever.
