

Energy communities epitomise this principle by allowing members of the energy communities to co-own renewable energy infrastructure (i.e. photovoltaic parks), collectively decide on energy ...

On average, two thirds of the potential green energy production was lost per day in March. In addition to being the only European Union member state without an interconnection with ...

In the interconnection and optimized operation of the classical hybrid AC/DC microgrids (HMG), the conventional line-frequency transformer cannot block grid faults and comprehensively ...

parliamentarians have submitted legislation to reform energy storage licensing procedures, targeting concerns over permit holders who fail to develop projects whilst potentially using ...

According to data compiled by the CyprusGrid tracking platform, the island country curtailed more than 167 GWh of renewable electricity in the first six months of 2025. It was equivalent to last ...

Cyprus' electricity system is operating at the edge of collapse due to a prolonged heatwave, with temperatures reaching 45°C and energy demand surging to record levels. The grid's fragility ...

MVDC PLUS is Siemens Energy's answer to the challenges that regional high-voltage transmission networks and medium-voltage distribution grids increasingly have to deal with. It makes the advantages of DC ...

Transformative solutions for a reliable, resilient and intelligent energy future. The falling costs and growing adoption of distributed energy resources (DER) such as renewable energy, storage systems and microgrids ...

The phase-out of net metering marks a significant shift in Cyprus's energy policy, reflecting a broader initiative to cultivate a more sustainable and financially viable electricity system. The ...

The Distributed Energy Buyback Scheme (DEBS) offers eligible customers a payment for electricity they export to the grid, including from rooftop solar PV systems, batteries and electric vehicles. The DEBS pricing structure ...

On this basis, power flow tracking technology is further introduced to conduct a detailed analysis of distributed energy power allocation, providing support for system operation optimization and ...
