

Monthly Electricity Statistics Highlights and data explorer of monthly electricity production and trade data for all OECD member countries and electricity production data for a selection of other economies

Fixing Belgium's energy conundrum Belgium relies on imported fossil fuels for much of its energy supply, a precarious condition given its hopes for the green transition and concerns about energy security. The country is ...

In 2050, Russia's annual consumption of energy from natural gas was forecast to decline to nearly **** exajoules under the Net Zero scenario considering that governmental measures to reduce carbon ...

Electricity demand surged by more than 4%, continuing to outpace overall energy use as electrification gains momentum. Yet global CO₂ emissions also rose by 1%, setting a record for the fourth consecutive year. Despite rapid ...

In 2024, EU coal production and consumption fell to their lowest recorded levels, reaching 242 million tonnes and 306 million tonnes, respectively. Compared with 2023, the consumption fell ...

The global energy industry is undergoing a major transformation, driven by the rapid surge in electricity consumption, which will increasingly be met by a mix of fossil fuels and renewable ...

In the calculations, we use the average annual household electricity consumption and, for business, we use 1,000,000 kWh annual consumption. More recent data are available for download. We report the prices of natural gas. ...

It's no secret that energy prices are rising. For some countries, energy prices hit record highs in 2022, and the Energy Support Scheme, which provides support with energy bills for businesses and organisations, was ...
