

Emissions trading scheme explained

Could we count this towards our 2040 efforts without flooding the Emissions Trading Scheme with those credits? It would not be simple, but it would actually support Europe's wider goals.

Although carbon emissions trading systems are universally acknowledged as one of the most potent policy instruments for counteracting hazardous climate trends, and digitalization is seen ...

The EU Emissions Trading System 2 introduces a new carbon pricing system from 2027 covering buildings, transport, and small industry, requiring around 12,000 companies to manage rising compliance costs, market volatility, and ...

An emissions trading scheme does not bother about individual entities or sectors. It bothers about the economy-level aggregate effect, which is where, ideally, the ambition should be evaluated.

The EU ETS is a cap and trade, which sets a maximum limit (cap) on total allowable emissions of carbon dioxide (CO₂) and other greenhouse gases set by legislation. Within this cap, ...
