

# List of all dwarf planets

Planets and dwarf planets of the Solar System. Compared with each other, the sizes are correct, but the distances are not. The Solar System is a group of space objects that are held together by gravity, with the Sun in the center. ...

A dwarf planet is a celestial body that's smaller than a planet but larger than an asteroid or other small rock within the solar system. They're not planets as a result ...

In July of 2015, a spacecraft named New Horizons arrived at Pluto after a long journey. It took amazing pictures of this dwarf planet and will continue to study other objects in the Kuiper Belt ...

Asteroids, also known as minor planets, are the rocky remnants of the material that formed the planets of our solar system. The Daily Minor Planet Project needs your help to look through images collected by the Catalina Sky ...

Our solar system is just one specific planetary system--a star with planets orbiting around it. Our planetary system is the only one officially called "solar system," but astronomers have discovered more than 3,200 other stars ...

There are 8 officially recognized Solar System planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Most of them, except Mercury and Venus, have their own natural satellites, commonly called ...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own satellites; comets and other icy bodies; and ...

Pluto, large, distant member of the solar system that formerly was regarded as the outermost and smallest planet. In 2006 a group of experts in the scientific community voted to give Pluto the new classification of dwarf planet. ...
