

The International Society for Microbial Ecology (ISME) seeks to advance the field of microbial ecology by supporting scientists and practitioners to further develop their knowledge and skills. ISME is the membership ...

Microbial adsorption is regarded as a sustainable and efficacious approach for REE recovery [19, 21, 22, 23]. Compared with traditional chemical methods, microbial adsorption exhibits several ...

MAS-100 VF[®]; Portable battery operated microbial air sampler; Synonyms: Systèmes de contrôle microbiologique de l'air, [®]chantillonneur d'air portatif at Sigma-Aldrich

This study presents the design and evaluation of a plant-based bio-battery, specifically a plant microbial fuel cell (plant-MFC), utilizing peppermint plants and monitored by an open-source ...

Microbial fuel cells (MFCs) have emerged as a promising technology to convert biomass and organic waste into electricity, offering an eco-friendly and sustainable alternative to fossil fuels. ...

Microbial Power: Engineering with Life Biobatteries aren't science fiction. They're real, tangible devices that rely on bacteria--specifically, endospores--to produce electricity through metabolic processes. These endospores, the dormant and ...

With the MAS-100 Sirius[®], MBV AG introduces the successor to the MAS-100 NT[®]; - the world's best-selling active microbial air sampler. This agar-based air sampler sets a new benchmark ...

Despite the promising potential of sodium bisulfate in battery technologies, several significant challenges currently hinder its widespread adoption and commercial viability. These obstacles ...

Microbial Drug Resistance (MDR) is an international, peer-reviewed journal that covers the global spread and threat of multi-drug resistant clones of major pathogens that are ...

Microbial Cell Factories is an open access peer-reviewed journal that covers any topic related to the development, use and investigation of microbial cells as producers of ...

And this is just the beginning. The Binghamton team is now working on a unified printing process for the entire battery and developing a power management system to regulate charging and discharging--like solar

Imagine a city where wastewater isn't just waste -- but a source of power for the entire urban grid. Recent breakthroughs show that biohydrogen reactors (Microbial Electrolysis Cell, MEC) are ...

2025, Standard Terminology for Nickel-Titanium Shape Memory Alloys, ...

Rechargeable lithium-ion batteries (LIBs) are known to be practical and cost-effective devices for storing electric energy. LIBs have a low energy density, which calls for the development of ...
