

Comparative Analysis of ESS Battery Systems: Efficiency and Cost-Effectiveness As we look ahead to the tech landscape in 2025, figuring out the best Energy Storage Systems (ESS) is ...

Europe requires vast amounts of critical raw materials to fuel their green transition. The European Union has invested in several strategic projects to boost their domestic CRM supply while reducing dependencies on importing from ...

In a major step forward for sustainable energy technology, researchers at Worcester Polytechnic Institute (WPI), led by Professor Yan Wang, William B. Smith Professor of Mechanical and ...

The European Union's designation of the "Jadar" lithium project as strategic for critical raw materials opens new opportunities for Serbia, positioning it not only as a lithium producer but ...

"It is about how lithium becomes a catalyst for AI transformation, battery innovation, and smart energy solutions." Ghana aims to leverage this collaboration as part of its broader economic ...

Sodium is more than 500 times more abundant than lithium, which is available in a few countries. Sodium-ion battery charges faster than lithium-ion variants and have a three times higher lifecycle. However, sodium-ion ...

The development of safer, more sustainable, and more potent lithium-sulphur batteries for e-mobility is the focus of the recently launched EU research project TALISSMAN (Technologies ...

Protests against the mining of lithium in Serbia indicate that moving toward green energy sometimes can be rather intricate, if not contradictory at certain points. On one hand, new ...

Potassium-ion batteries store more energy than sodium-ion options, making them ideal for large-scale green energy storage, according to a summary of recent research at Dongguk University ...

Here are a couple of key lithium battery technology: Piles &#224; semi-conducteurs : A newer type of battery with the potential for more energy and better safety. Syst&#232;mes avanc&#233;s de gestion de batterie (BMS) : Using artificial intelligence ...

Octillion Power Systems, a California-based supplier of high-density lithium-ion battery packs for electric vehicles of all types, has expanded its existing partnership with Vision Marine ...

The treatment of the protest against the mining of lithium, in some respects a precursor to the student protest,

was dominated by an anti-European narrative, in which the EU was accused ...

Serbia wants to be one of Europe's top lithium suppliers and is resurrecting a controversial shelved mining project to realise those ambitions. The knock-on impact on its EU membership bid cannot be ignored.

A research team in South Korea has developed a breakthrough transfer printing technology that forms protective thin layers on lithium metal surfaces--an innovation poised to solve the long-standing dendrite issue plaguing next ...

July 2, 2025 Vanadium Redox Flow Batteries: A Safer Alternative to Lithium-Ion Technology As the global push for renewable energy accelerates, the demand for safe, sustainable, and ...

This initiative is part of the £2.5billion DRIVE35 programme supporting UK EV manufacturing supply chain and creating jobs in a sustainable industry. Clean tech innovator Mint Innovation ...

A Cleaner, Cheaper Way to Make High-Performance Lithium-Ion Batteries A new breakthrough in battery chemistry could eliminate the use of cobalt and nickel in lithium-ion batteries.

This paper examines the polarising Jadar lithium mining project in Western Serbia, proposed by the multinational company Rio Tinto. Three main pain points of the project are explored: the ...

YOGYAKARTA - In the midst of the increasing energy demand, especially in electronic devices and electric vehicles, battery technology continues to develop. One of the most promising ...

A team of Chinese researchers has made a groundbreaking breakthrough to revive aging lithium batteries by injecting a "shot" of lithium ions, potentially extending their lifespan from the typical 6-8 years or 1,000-1,500 ...

Norway has already opened an LFP battery gigafactory with a capacity of 1 gigawatt-hour per year, equivalent to about 3 million battery cells. Serbia's Elevens factory in Subotica is the first ...

A 48V lithium ion battery 200Ah is a powerful, high-capacity battery designed for demanding applications like solar, electric vehicles, and industrial uses. It offers long lifespan, fast ...

The use of dry electrode manufacturing in the production of lithium ion batteries is beginning to scale, promising to significantly lower emissions and further reduce costs in the future. Tesla is set to start producing some of its battery cells ...
