

# What is the biggest dwarf planet

Ceres, dwarf planet, the largest asteroid in the main asteroid belt, and the first asteroid to be discovered. It revolves around the Sun once in 4.61 Earth years at a mean distance of 2.77 astronomical units. Ceres was named ...

There are 8 officially recognized Solar System planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Most of them, except Mercury and Venus, have their own natural satellites, commonly called ...

Pluto, once considered the ninth planet, is now classified as a dwarf planet and is one of the largest objects in the Kuiper Belt. Other notable dwarf planets in this region include Eris, Haumea, and Makemake.

BEIJING -- The largest unnamed planet in the solar system has recently been named after the Chinese water god Gonggong by the International Astronomical Union (IAU). This is ...

Solar system - Planets, Moons, Orbits: The eight planets can be divided into two distinct categories on the basis of their densities (mass per unit volume). The four inner, or terrestrial, planets--Mercury, Venus, Earth, and Mars--have rocky ...

Pluto, large, distant member of the solar system that formerly was regarded as the outermost and smallest planet. In 2006 a group of experts in the scientific community voted to give Pluto the new classification of dwarf planet. ...

Neptune is the eighth and farthest planet from the Sun, which can't be seen with the naked eye from the Earth. This distant blue planet has faint rings, numerous moons, and no solid surface. In this article, we'll tell you more ...

In July of 2015, a spacecraft named New Horizons arrived at Pluto after a long journey. It took amazing pictures of this dwarf planet and will continue to study other objects in the Kuiper Belt ...

Pluto is not a planet. In 2006, the International Astronomical Union reclassified it as a "dwarf planet". This change sparked an ongoing cosmic debate. While Pluto may not be a full-fledged planet anymore, it certainly has ...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own satellites; comets and other icy bodies; and ...

Thus, Pluto, Eris, and Ceres --Ceres, with a diameter of some 940 km (585 miles), is the largest object in the asteroid belt--were designated dwarf planets. In June 2008 the IAU created a subcategory within the dwarf
