China discovered nearly one million tons of lithium ore in Yajiang county, Sichuan province, marking Asia's largest known pegmatite monomer lithium ore source to date, Xinhua News Agency reported on Thursday.

The battery recycling startup Cylib has achieved a significant breakthrough. Together with Belgian materials company Syensqo, the young firm has produced high-purity lithium hydroxide from used EV batteries. This can be used as ...

A 48V lithium ion battery 200Ah is a powerful, high-capacity battery designed for demanding applications like solar, electric vehicles, and industrial uses. It offers long lifespan, fast ...

While some components are sourced from overseas, product assembly and quality testing take place here in America. The NV14 battery uses Lithium Iron Phosphate (LiFe (PO₄) or LFP). Lithium Iron Phosphate is ...

The decision follows several high-profile maritime incidents involving lithium battery fires, including the recent sinking of the Morning Midas in the North Pacific this June. The 600-foot vessel ...

At the so-called national lithium table, a high-level meeting of ministers and regional politicians, Argentina's President Mauricio Macri announced that 100,000 tons of lithium would ...

Anode-free Li metal batteries suffer from irreversible Li plating/stripping and interfacial side reactions. Here, authors propose a dual-gradient metal layer on Cu current collector to ...

Much of China's lithium resources are sourced from salt lakes in Qinghai and the Xizang autonomous region. The joint venture will further boost technological and financial capabilities for developing China's abundant salt ...

Exhibit 1 sourced from the U.S. Department of Energy demonstrates concentrations of select critical minerals including lithium (Li), nickel (Ni), cobalt (Co), manganese (Mn), barium (Ba), ...

Once liberated from its mineral source, lithium travels through river systems, eventually reaching the oceans. In marine environments, it can be incorporated into clay minerals forming on the ...

SK on is accelerating efforts to secure domestically sourced lithium hydroxide, a critical material for electric vehicle (EV) batteries, in response to the U.S. Inflation Reduction Act (IRA) and ...

The world of electric vehicles (EV) is in a constant state of evolution, driven by relentless innovation in battery technology. For years, lithium-ion batteries have been the undisputed champions, powering everything
